USE GPS TRACKING TO CLAIM YOUR FUEL TAX CREDITS

BlackBox has partnered with the Prism solution to enable you to claim the fuel tax credits you are entitled to, with ease and confidence.

Using GPS data from your existing BlackBox tracking platform, Prism accurately calculates your FTC claim across your fleet to submit to the ATO. The solution combines and automates telemetry data and vehicle information with detailed location and boundary analysis to determine your fleet's operations and fuel consumption.

Based on this apportionment and your fleet specifications, Prism provides the necessary reporting information for you to enter accurate FTC claims into your BAS statement. >>[LEARN MORE HERE](#)

NEW PRODUCT APPROVED!

HILLS DESCENT MONITORING TECHNOLOGY

8004-IAPC IVU TYPE APPROVED

BlackBox Control is excited to announce that in November 2019, TCA granted type-approval of our new 8004IAPC-4G In Vehicle Unit (IVU) for release to market.

The Australian-designed and developed telematics device represents a significant advancement in Intelligent Access Program (IAP) technology. Designed to withstand Australia's harshest conditions, the 8002IAPC-4G is able to support Level 3 Applications of the NTF, the highest standard available. It is also positioned for other new applications requiring Type Approved hardware, with HDM being the first such example. The 4G-enabled device both fulfils the requirement for a Type Approved device, while delivering a range of commercial intelligence benefits when operating on our Knosis platform.

In addition, the new IVU will allow users to access additional functionality on the National Telematics Framework, such as Intelligent Mass functionality, expected for release in 2020. By selecting the 8004IAPC-4G as their IVU, users will be future-proofing their investment around regulatory programs.

OUT AND ABOUT IN KALGOORLIE

Account Manager Chris Holdsworth has just spent a week in Kalgoorlie & Boulder visiting our existing client base as part of BlackBox's regular client support and service. In addition, he reached out to new and potential clients to demo the full range of BlackBox solutions that can add value to local businesses.

On Thursday 21 November, Chris was joined by our General Manager, Mark Langford, at the 20th Annual What's Down the Track exhibition, where they had the opportunity to present on the latest innovations in telemetry and compliance with the potential to unlock benefits for local businesses and organisations.

In addition, Mark met with KBCCI CEO Simone de Been and the Chamber of Minerals and Energy, Rowena Olsen and discussed the initiatives and strategies that will help our objectives to be the number one tracking provider in the Goldfields.
